SYSPAC QuickScreen

SYSPAC QuickScreen is a concise, comprehensive, modular, time-saving, space-saving, table-driven "Screen Builder" generic from one Pick System to another and from Screen Type to Screen Type, enabling the user to create custom entry screens.

- Completely Menu Driven
- Step- by- Step Screen Building
- Color & Graphics Capabilities
- Window Creation
- Standard & Custom Input Validation
- Optional QuickWriter Interfacing
- On-line, Printable Help Screens
- Add/Edit Help Messages
- Quick Referencing
- Capabilities
- Comprehensive User Reference Material
- Utilities for Creation & Maintenance of Programs, Dictionaries, and Custom Help Messages
- Program Testing

SYSPAC QuickShow

SYSPAC QuickShow uses the relational data base facilities of your revelation or Pick Operating System to rapidly produce AD HOC reports on your terminal or printer. QuickShow asks you to a few simple questions, then builds a command sentence for the operating system to execute.

QuickShow displays menus of file names and field names. You merely enter the menu numbers of the field to be sorted, selected, displayed, and/or totaled. You do not have to refer to a dictionary listing to enter the correct names. Typographical errors in long command sentences become a thing of the past!

- Categorize Database Fields for Easy Reference
- Create A Report by Building A Command Sentence
- QuickShow Leads You Through the Command Sentence Building Process in A User-Friendly Manner
- Custom Reports May Be Stored For Future Use
- Print A Stored Report
- Command Sentences May Be Edited Using A Menu-Driven Editing Process
- Delete A Stored Report
- Comprehensive User Reference Material
- User-Friendly Help Screens Which Can Be Edited By The User
